REST API's

Git + Github

Summary

I possess professional experience developing web applications and hybrid, cross-platform mobile applications utilizing a wide array of technologies. I specialize in JavaScript and TypeScript, yet I am talented with a multitude of languages, frameworks, libraries, and other tools.

Career History

Oct 2023 –
Present

[Undisclosed Location] Frontend Developer Remote

I work on a variety of projects for various clients at this agency. I contributed to an interactive demo project that is claimed to be the best piece produced in over a decade in agency history. I primarily work with Vue and JavaScript, but I also work with Azure, WordPress, and Firebase (inc. Firestore and Firebase Functions). One of my most recent successful projects is a PWA.

Jan 2023 –
May 2023

The Eighth Notch, Inc. Web Developer Remote

As a contractor, I was responsible for various projects, including a client portal, a data dashboard, and The Eighth Notch's company website itself. Although I primarily worked on the frontend aspects of these projects, I was also involved with backend development. I had exposure to Google Cloud Platform (GCP) and interacted with BigQuery and MySQL database management systems. Common technologies used were Typescript, JavaScript, and Python/Flask. I also kept my Jira tickets updated and tidy, committed my changes frequently, pushed to Github often, and deployed my projects to the test environment using Jenkins.

Jul 2022 –
Oct 2022

Freightwaves
Frontend Engineer
Remote

I worked on various SaaS platforms pertaining to the freight industry, most notably SONAR and SCI. Technologies used include, but are not limited to, TypeScript, JavaScript, and Vue.

Jan 2022 –
April 2022

Tombras Group
Frontend Engineer
Remote

I collaborated with the “DevSouth” .NET team and worked on websites for a Fortune 500 company, specifically Daimler. I was tasked with updating and modifying websites for Freightliner and Western Star. I worked with Umbraco, CSS, Tailwind CSS, JavaScript, and of course, Git and Bitbucket.

Mar 2021 –
Jan 2022

Solution Consulting Group
Web Application Developer
Remote

I was the sole frontend developer for a user interface for a collectable card grading software. With this solution, graders can drag lines to calculate centering scores and provide grades for corners, edges, and surfaces for both the front and back of the card. In addition, I completed small tasks, for example, developing email templates. Common technologies included HTML, CSS, JavaScript, TypeScript, Git, GitHub, Bootstrap, and some jQuery and Symfony (PHP). Object-Oriented programming practices were often used.

Jan 2021 –
March 2021

Pass It Down, Inc.
Contract Developer (Temporary Assignment)
Remote

This was a contract role. I worked alongside a good friend, colleague, and mentor developing a SaaS platform for creating digital storyboards, ones often found in museums, for example. Common technologies used were JavaScript (React library) and CSS.

June 2020 –
Jan 2021

Bluestone Apps
Junior Developer
On-Site/Knoxville, TN

As my first developer role, I was tasked with coordinating development projects with overseas developers in addition to working on hybrid, cross-platform mobile applications using Angular in conjunction with Ionic Framework and Cordova. Two major projects I worked on were Check Runner and Home Birds. You can find the Check Runner app in the Google Play Store and iOS App Store.
